

Real-time classroom captioning for  
deaf & hard of hearing students

[skrybe@uw.edu](mailto:skrybe@uw.edu)

## Starting a session

Connect to one or more microphones that will be identified in the captions.

Choose a dictionary that is most appropriate for the class content for the most accurate captions.

History 3/3/2016

we're going to get started in just a minute. Before we start we have someone here with a quick request.

**A** Hey everyone. Just write down a question or two that you were hoping to have addressed by attending this lecture today. Don't overthink it, it doesn't have to be deep.

OK thanks everyone. Now let's hand it back over to the person you all came to see.

**B** Hi, thanks for having me. Let's get into the topic of user centered design. As designers we are trained to gather requirements.

What does the product need to do? What are the goals of the product? What is the problem that we're trying to solve?

... To start off though, I want to focus on one question in particular. Who is the product for? Think about how

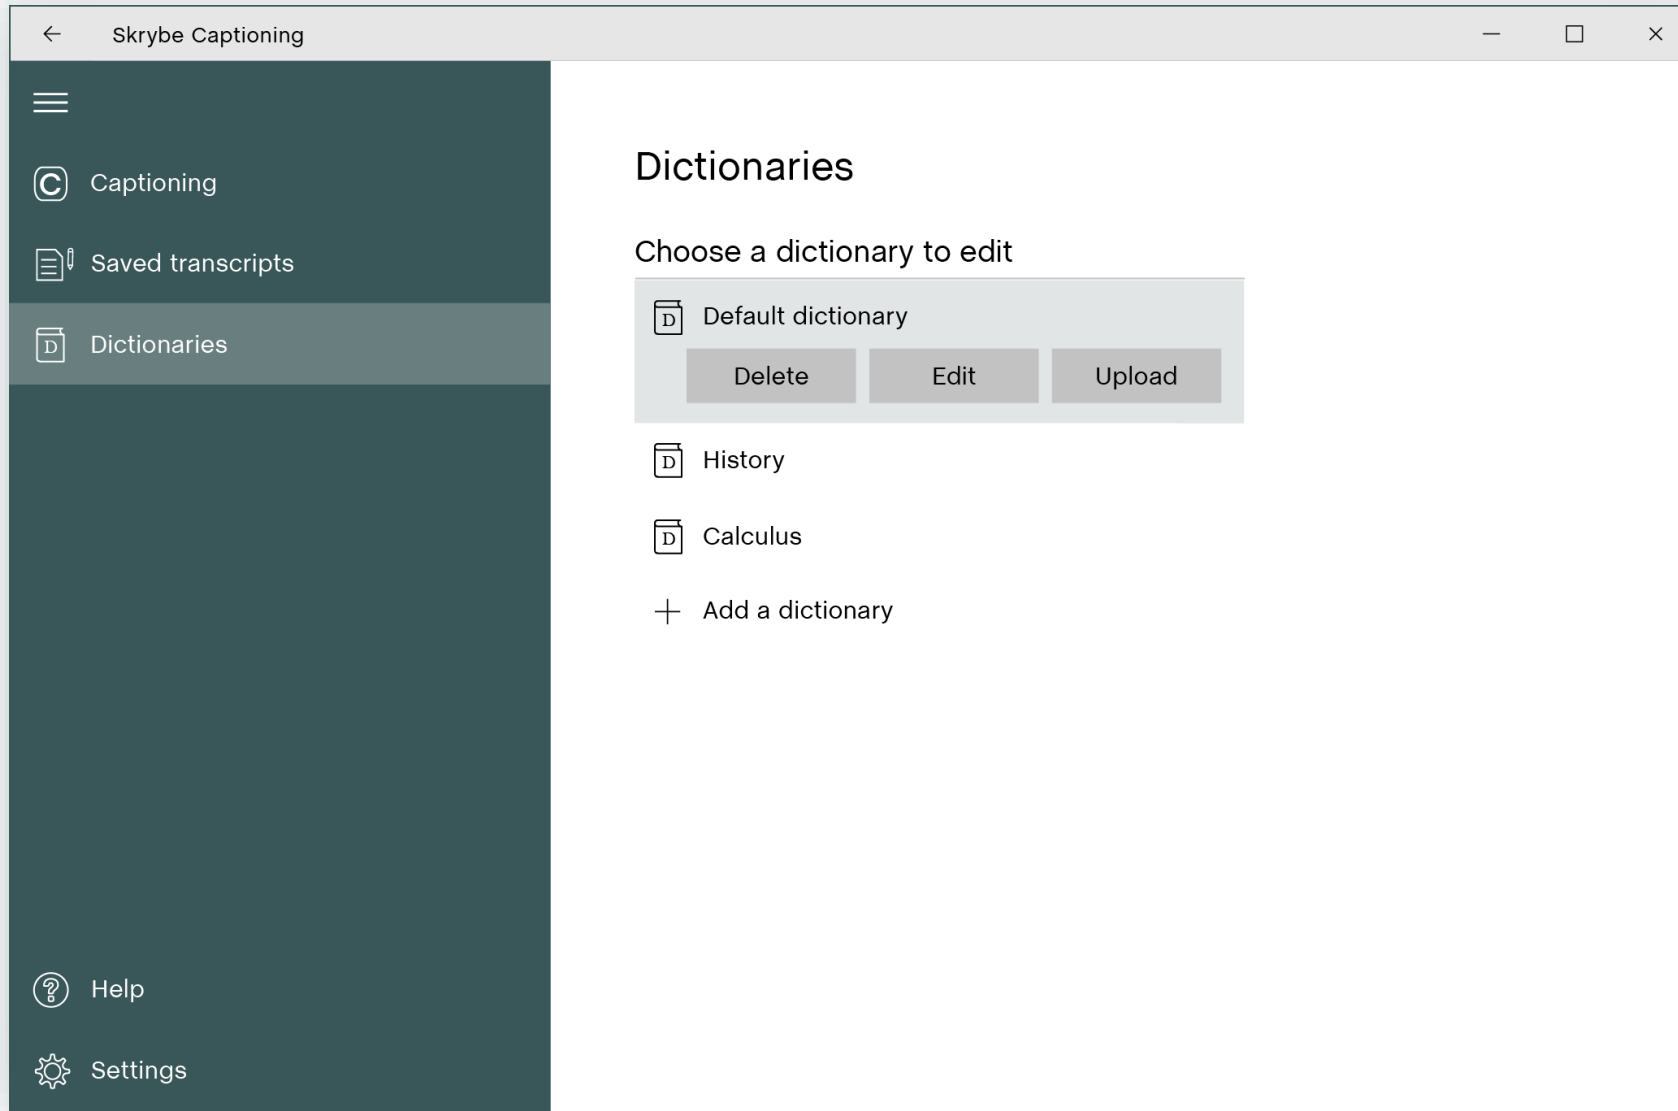

## Viewing captions

Captions appear in real time with each microphone identified by a colored circle.

Easily scroll back to previous parts of the transcript.

Change connected microphones, dictionary, and font size without leaving the captioning session.

Stop the captioning session to save the transcript to a file and start fresh next time.

## Dictionaries

Add dictionaries to improve the accuracy of the captions for specific subjects or topics.

Upload course documents into dictionaries so that specialized and domain-specific words can be recognized in the captions.
